TEST CASES

User Story	Assertions	Manual Test Case
As a user, I can customize the feed and information that I receive.	A screen selection is present for the user to select through the available categories.	At initial setup, a screen will display a selection of categories or topics of interest for the user to select from. The app will pull feeds according to the user selection.
As a user, I can see the current weather.	The weather will be displayed on the main screen within the card view.	The weather card will display the current weather based on GPS data gathered from the user's location.
As a user, I can see the meetups that are around me.	Available Meetup events would be displayed in the card view.	Tapping on the Meetup card auto-populates available events based on the location data of the phone device.
As a user, I can see articles that relate to my interest.	Articles would be called from the Reddit API based on the keyword selected initially by the user.	Tapping on the Reddit card will auto-populate the article related to the category of interest.
As a user, I can see the Wi-Fi status of the phone.	The notification bar displays the status of the Wi-Fi signal/status.	Swiping down the notification bar displays the status of the Wi-Fi signal.
As a user, I can discover new places around me.	Foursquare is called in the background to display a list of available venues around the user location via GPS.	Tapping on the Foursquare card populates all the places around me by utilizing the phone's GPS sensor.
